## **ANSWERS TO QUESTIONS**

- 1. No. A work sheet is not a permanent accounting record. The use of a work sheet is an optional step in the accounting cycle. It is simply a convenient and efficient tool for completing some of the steps in the accounting cycle.**
- 2. Formal financial statements are needed because the columnar data are not properly arranged and classified for statement purposes. For example, a drawings account is listed in the balance sheet debit column with assets, and an accumulated amortization account is listed in the balance sheet credit column with liabilities.**
- 3. Adjusting entries are made prior to preparation of the financial statements to adjust account balances to properly reflect revenue and expenses on an accrual basis. Adjusting entries can affect both temporary and permanent accounts. Closing entries affect only temporary accounts. Closing entries are made at the end of an accounting period after preparation of the financial statements to transfer revenue, expense, and drawings account balances to the owner's capital account and reset these temporary accounts to zero.**
- 4. (1) (Dr) Individual revenue accounts and (Cr) Owner's Capital.  
(2) (Dr) Owner's Capital and (Cr) individual expense accounts.  
(3) (Dr) Owner's Capital and (Cr) Owner's Drawings.**
- 5. The post-closing trial balance contains only balance sheet accounts. Its purpose is to prove the equality of the permanent account balances that are carried forward into the next accounting period.**
- 6. The accounts that will not appear in the post-closing trial balance are Amortization Expense; Ben Alschuler, Drawings; and Service Revenue. These are all temporary accounts.**
- 7. The three trial balances are the (1) (unadjusted) trial balance, (2) adjusted trial balance, and (3) post-closing trial balance.**

## Questions Chapter 4 (Continued)

8. The work sheet affects two steps: (1) journalizing and posting adjusting entries, and (2) preparing financial statements. When a work sheet is used, the financial statements are prepared from the work sheet. In addition, the adjusting entries are usually journalized and posted after the financial statements are prepared.
9. The steps that involve journalizing are (1) journalize the transactions, (2) journalize the adjusting entries, and (3) journalize the closing entries.
10. Correcting entries differ from adjusting entries because they (1) are not a required part of the accounting cycle, (2) may be made at any time, and (3) may affect any combination of accounts. Adjusting entries affect both an income statement account and a balance sheet account.
11. The standard classifications in a balance sheet are:
  - Assets
  - Current Assets
  - Long-term Investments
  - Capital Assets
  
  - Liabilities and Owner's Equity
  - Current Liabilities
  - Long-term Liabilities
  - Owner's Equity
12. A company's operating cycle is the average time that is required to go from cash to cash in producing revenues.
13. Current assets are cash and other resources that are reasonably expected to be realized in cash or sold or consumed in the business within one year of the balance sheet date or the company's operating cycle, whichever is longer. Current assets are listed in the order of their liquidity.

**Questions Chapter 4 (Continued)**

- 14. Long-term investments are resources that can be realized in cash. However, the conversion into cash is not expected within one year or the operating cycle, whichever is longer. Capital assets are resources of a relatively permanent nature that are being used in the business and not intended for sale.
- 15. The major differences between current liabilities and long-term liabilities are:

<u>Difference</u>	<u>Current Liabilities</u>	<u>Long-term Liabilities</u>
Source of payment.	Existing current assets or other current liabilities.	Other than existing current assets or creating current liabilities.
Time of expected payment.	Within one year or the operating cycle.	Beyond one year or the operating cycle.
Nature of items.	Debts pertaining to the operating cycle and other short-term debts.	Mortgages, bonds and other long-term liabilities.

- 16. (a) The owner's equity section for a corporation is called shareholders' equity.
- (b) The two accounts and the purpose of each are: (1) Common Shares (or share capital) is used to record investments in the business by the owners (shareholders). (2) Retained Earnings is used to record income retained in the business (that is, the net income earned minus any dividends distributed to the owners).
- 17. Liquidity is the ability of a company to meet its obligation as they become due. One measure of liquidity is working capital.

**Questions Chapter 4 (Continued)**

**\*18. The net income of \$9,000 will appear in the income statement debit column and the balance sheet credit column. A net loss will appear in the income statement credit column and the balance sheet debit column.**

**\*19. A reversing entry is the exact opposite, both in amount and in account titles, of an adjusting entry. Reversing entries are an optional step in the accounting cycle. In some accounting systems, they simplify the recording of subsequent transactions related to the adjustments.**

**\*20. (a) Jan. 1 Interest Payable ..... 4,500  
                   Interest Expense ..... 4,500  
                   To record reversing entry.**

**Jan. 10 Interest Expense ..... 5,000  
                   Cash ..... 5,000  
                   To record interest payment.**

**Because of the January 1 reversing entry that credited Interest Expense for \$4,500, Interest Expense will have a debit balance of \$500 which equals the expense for the current period.**

**(b) Jan. 10 Interest Payable ..... 4,500  
                   Interest Expense ..... 500  
                   Cash ..... 5,000  
                   To record interest payment and  
                   reversal of accrual.**

**Note that Interest Expense will again have a debit balance of \$500.**

## SOLUTIONS TO BRIEF EXERCISES

### BRIEF EXERCISE 4-1

1. Prepare a trial balance on the work sheet
2. Enter adjustment data
3. Enter adjusted balances
4. Enter adjusted balances in appropriate statement columns
5. Total the statement columns, calculate net income (loss), and enter it on the work sheet.

Filling in the blanks provided, the correct answers are 5, 2, 1, 3, 4.

### BRIEF EXERCISE 4-2

Dec.	31	Service Revenue .....	50,000	
		T. Khalifa, Capital .....		50,000
	31	T. Khalifa, Capital .....	30,000	
		Salaries Expense .....		26,000
		Supplies Expense .....		4,000
	31	T. Khalifa, Capital .....	2,000	
		T. Khalifa, Drawings .....		2,000

Ending capital balance is  $\$30,000 + \$50,000 - \$30,000 - \$2,000 = \$48,000$

## **BRIEF EXERCISE 4-5**

The accounts that will appear in the post-closing trial balance are:

**Accounts Payable**  
**Accounts Receivable**  
**Capital Assets**  
**Cash**  
**Long-term Debt**  
**Prepaid Expenses**

Note that these are all balance sheet accounts.

## **BRIEF EXERCISE 4-6**

The proper sequencing of the required steps in the accounting cycle is as follows:

- 1. Analyse business transactions.**
- 2. Journalize the transactions.**
- 3. Post to the ledger accounts.**
- 4. Prepare a trial balance.**
- 5. Journalize and post the adjusting entries.**
- 6. Prepare an adjusted trial balance.**
- 7. Prepare the financial statements.**
- 8. Journalize and post the closing entries.**
- 9. Prepare a post-closing trial balance.**

Filling in the blanks, the answers are 9, 6, 1, 4, 2, 8, 7, 5, 3.

**Net Income = \$14,180 – \$780 – \$5,360 – \$2,600 = \$5,440**

**Ending Capital = \$115,000 + \$5,440 = \$120,440**

### EXERCISE 4-7 (Continued)

(b) Working capital (current assets less current liabilities) is \$10,360 (\$40,040 – \$29,680). The current ratio (current assets divided by current liabilities) is 1.35:1 (\$40,040 ÷ \$29,680). In addition, approximately 50% of current assets are in the form of cash. The company's liquidity appears to be reasonably good.

### EXERCISE 4-8

(a) Working Capital = Current Assets – Current Liabilities

2000: \$1,408,529 - \$568,035 = \$840,494

1999: \$1,064,667 - \$401,111 = \$663,556

1998: \$726,484 - \$315,589 = \$410,895

$$\text{Current Ratio} = \frac{\text{Current Assets}}{\text{Current Liabilities}}$$

2000:  $\frac{\$1,408,529}{\$568,035} = 2.48:1$

1999:  $\frac{\$1,064,667}{\$401,111} = 2.65:1$

1998:  $\frac{\$726,484}{\$315,589} = 2.30:1$

(b) The Carnival's liquidity in 2000 is slightly below that of 1999 and slightly higher than 1998 based on the current ratios. It is still a very positive ratio, however, with sufficient current assets to cover current liabilities. In terms of working capital, the liquidity has increased in 2000, compared to 1999 and 1998.

**PROBLEM 4-8A**

(a)

(in thousands)	1999	1998
<b>Working Capital</b>	$\$34,132 - \$31,462 = \$2,670$	$\$23,573 - \$24,774 = (\$1,201)$
<b>Current Ratio</b>	$\frac{\$34,132}{\$31,462} = 1.08:1$	$\frac{\$23,573}{\$24,774} = 0.95:1$

(b) The working capital and current ratios both show an improvement in 1999 over 1998. In 1998, the working capital was negative and the current ratio less than 1, indicating that the company did not have sufficient current assets to cover current liabilities. In 1999, the company had a positive working capital amount of \$2,670,000 and a current ratio of greater than 1. Sleeman's liquidity has improved.

## BYP 4-1 FINANCIAL REPORTING PROBLEM

- (a) Second Cup's balance sheet is classified based on the liquidity of the assets and liabilities. Classifications include current and long term assets, current and long term liabilities and shareholders' equity.
- (b) Cash equivalents consist of investments in short-term money market instruments. They are recorded at the lower of cost and estimated market value. They are highly liquid investments (see Note 2 to the financial statements).
- (c) Working capital = Current assets - Current liabilities

2000:  $\$5,416,000 - \$6,405,000 = (\$989,000)$

1999:  $\$24,990,000 - \$6,451,000 = \$18,539,000$

Current ratio = Current assets  $\div$  Current liabilities

2000:  $\$5,416,000 \div \$6,405,000 = 0.85:1$

1999:  $\$24,990,000 \div \$6,451,000 = 3.87:1$

Working capital and current ratio were significantly higher in 1999 than in 2000.

## BYP 4-2 INTERPRETING FINANCIAL STATEMENTS

(a)

(in millions)	2000	1999
<b>Working Capital</b>	$\$226.2 - \$260.2 = (\$34.0)$	$\$221.3 - \$253.9 = (\$32.6)$
<b>Current Ratio</b>	$\frac{\$226.2}{\$260.2} = 0.87:1$	$\frac{\$221.3}{\$253.9} = 0.87:1$

I think Future Shop's creditors should be concerned about its liquidity. Creditors lend money to companies with the expectation that they will be repaid at a specified point in time in the future. The working capital is negative in both years, despite the company reporting a profit in 2000. The current ratio is also less than 1, indicating the company may have difficulty meeting its current commitments without obtaining additional financing. The fact that income was reported in 2000 versus a loss in 1999 should help alleviate some of their concerns.

(b) As a creditor in this situation I would request information on the company's plans for the upcoming year – such as a cash forecast.

### MEMO

**To:** Accounting Instructor

**From:** A. Student

**Re:** Steps in the Accounting Cycle

The required steps in the accounting cycle, in the order in which they should be completed, are:

1. Analyse business transactions.
2. Journalize the transactions.
3. Post to the ledger accounts.
4. Prepare a trial balance.
5. Journalize and post the adjusting entries.
6. Prepare an adjusted trial balance.
7. Prepare the financial statements.
8. Journalize and post the closing entries.
9. Prepare a post-closing trial balance.

The optional steps in the accounting cycle include preparing a work sheet and preparing reversing entries. If a work sheet is prepared, it is done after step 3 above, and it includes steps 4 and 6. The work sheet is a form used to make it easier to prepare the adjusting entries and financial statements. If reversing entries are prepared, they are journalized and posted after step 9, at the beginning of the next accounting period. A reversing entry is the exact opposite of a previously recorded adjusting entry, and simplifies the recording of subsequent transactions.

## BYP 4-8 ETHICS CASE

**(a) The stakeholders in this case are:**

**You, as controller.**

**Eddy Lieman, president.**

**Users of the company's financial statements (particularly the banks and other creditors to whom the statements were issued).**

**(b) The main ethical issue is the continued circulation of significantly misstated financial statements. As controller, you have just issued misleading financial statements. You have acted ethically by telling the company's president. The president has reacted unethically by allowing the misleading financial statements to continue to circulate.**

**A second issue is the proposal to compensate for the original misstatement by “adjusting” (misstating) the current year’s financial statement.**

**(c) As controller, you should impress upon the president the consequences of having those misleading financial statements detected by some user or the regulatory body (especially if you are a public company). Also stress upon him that you have a professional obligation to correct the statements or to resign.**
